### INSTALLATION GUIDELINES

- Plug the appliance into an exclusive properly installed-grounded wall outlet. Do not under any circumstances cut or remove the third (ground) prong from the power cord. Any questions concerning power and/or grounding should be directed toward a certified electrician or an authorized Avanti Products service center.
- This water dispenser is not recommended for outdoor use.
- Do not locate the dispenser in an area where the temperature may fall below freezing (32º F).
- Keep area around dispenser free of dust and dirt.
- Keep the reserve supply of water bottles away from excessive heat and light.

### OPERATION INSTRUCTIONS

#### Before Using Your Water Dispenser

- Check to be sure the following parts are included:
  - 1 Instruction Manual
  - 1 Removable Drip Tray
- The water cooler is pre-cleaned at the factory but the reservoir and water lines must be flushed with fresh water before use as follows:
  - Keep the unit unplugged.
  - Fill water tank with tap water full to capacity (about 20 ounces). Wait for 5 minutes until water settles.
  - Proceed to drain the water from both faucets until no more water remains.
  - Then, drain any water left in the tanks by opening the water drain caps located on the bottom, until it drains completely.
  - Proceed to close the drain caps. Also make sure both faucets are closed.
  - Place the water bottle on the water intake; allow water to stand for approximately one minute.
  - Open water faucets to insure water flows from both faucets.
  - Plug dispenser into the electrical outlet.
IT WILL TAKE APPROXIMATELY 1 HOUR TO REACH OPTIMUM TEMPERATURE. IF YOU CONSUME ONE 8 OZ. CUP, THE RECOVERY TIME IS APPROXIMATELY 25 MINUTES OR LESS. IF YOU CONSUME 2 OR MORE 8 OZ. CUPS, RECOVERY TIME CAN TAKE UP TO 1 HOUR.

NOTE: Your water dispenser has been cleaned and sanitized before leaving the factory, but in case a taste problem develops, place one tablespoon of baking soda and add tap water. Fill water tank again and repeat basic operations previously outlined.

When the PROGRAM button is pushed down, it’s under Energy Saving Program; The (green) E-S indicator will be displayed. During operation the (red) “WARM” cycle indicator will be displayed until the temperature of the water in the reservoir reaches 60°C/140°F. Once the temperature reaches 60°C/140°F (approximately 4 minutes) the (red) “WARM” indicator will turn off and will remain off until the temperature of the water in the reservoir drops to 50°C/122°F at which time the (red) “WARM” cycle indicator will turn on and the cycle will start again.

Once the water temperature reaches 90°C/194°F the (red) “HOT” cycle indicator will turn off and will remain off until the “HOT WATER” button in pressed again.

**Normal Program:**

During operation the (red) “HOT” cycle indicator will be on until the temperature of the water in the reservoir reaches 90°C/194°F (approximately 9 minutes). The (red) “HOT” cycle indicator will turn off and will remain off until the temperature of the water in the reservoir drops to 81°C/178°F at which time the (red) “HOT” cycle indicator will turn on and the cycle will start again.

When the unit is in “NORMAL PROGRAM” the “HOT WATER” button is non-functional.
Cold Temp (Energy Saver / Normal Modes):
The cold water cycle is not affected by either program and continuously runs to maintain a cold water temperature between 7°C/44°F and 10°C/50°F. Once the “Cold Switch” at the rear of the unit is turned ON the (blue) “COLD” cycle indicator will be on until the temperature of the water in the reservoir drops to 7°C/44°F or less, the (blue) “COLD” cycle indicator will turn off and the cooling cycle will stop until the temperature reaches 10°C/50°F, at which time the (blue) “COLD” cycle indicator will turn on again and the cooling cycle will start again.
